SUMMARY

Network Engineer with experience in enterprise LAN/ WAN monitoring, Layer 2/ Layer 3 troubleshooting, routing & switching, VLANs, SNMP monitoring, and network automation. Skilled in network monitoring tools, incident resolution, root cause analysis, and switch/ router troubleshooting in production environments. Hands-on experience with NMIS dashboards, Python automation, Wireshark, firewall monitoring, and network performance analysis.

PROFESSIONAL EXPERIENCE

Network Engineer

02/2025 – Present

CSIR – NAL (National Aerospace Laboratories)

Payroll: Arridae Infosec Pvt Ltd

- Monitored enterprise LAN/ WAN network infrastructure, device availability, bandwidth utilization, and uptime using NMIS dashboards and SNMP-based monitoring tools.
- Performed Layer 2 and Layer 3 troubleshooting involving VLAN communication failures, inter-VLAN connectivity issues, interface errors, and network outages.
- Conducted fault isolation and root cause analysis using Wireshark, SNMP, ping, traceroute, and PuTTY tools to minimize downtime.
- Monitored LLDP neighbors, MAC address tables, switch interfaces, endpoint communication, and port utilization across enterprise network environments.
- Supported switch and router monitoring operations for TP-Link, D-Link, Brocade, Quantum, and Juniper network devices.
- Configured and monitored OPNsense firewall rules, VPN connectivity, ACL policies, and secure network access controls.
- Developed Python automation scripts using Netmiko and Paramiko for switch monitoring, interface status collection, and automated log retrieval.
- Integrated Loki centralized logging for real-time alert tracking, network event monitoring, and troubleshooting analysis.
- Generated automated CSV-based network performance reports and monitoring dashboards for operational visibility.
- Assisted in identifying unreachable devices, interface failures, packet drops, and connectivity degradation through proactive monitoring.
- Maintained IP addressing records, subnet allocation details, and network topology documentation for infrastructure management.
- Supported Secure LAN, Telephone, and CCTV network operations in enterprise environments.
- Collaborated with internal technical teams during troubleshooting, maintenance activities, and incident resolution to ensure network stability and availability.
- Supported monitoring and troubleshooting activities in 24x7 production network environments.
- Assisted in incident management, alert monitoring, and escalation activities for network-related issues.

Python Developer Intern

08/2024 – 01/2025

JTR High Yields Agro Pvt Ltd

- Developed Python-based automation scripts for data handling and log processing tasks.
- Created utility applications including Password Generator, Calculator System, and File Handling applications using Python.
- Worked with Python concepts including loops, functions, dictionaries, exception handling, and file operations.
- Performed debugging, testing, and optimization of Python applications.
- Used VS Code and GitHub for application development and version control

Database Administrator Intern

06/2022 – 08/2022

Code Tantra Tech Solutions

- Assisted in database monitoring and maintenance activities. Executed SQL queries for troubleshooting and data validation.
- Supported backup and recovery operations.
- Monitored database performance and assisted in resolving slow query issues

EDUCATION

B.Tech – Computer Science Engineering

08/2019 – 05/2023

Sree Rama Engineering College (Affiliated to JNTUA)

SKILLS

Networking & Switching:

- TCP/ IP, OSI Model
- LAN/ WAN, VLAN, Inter-VLAN
- Routing & Switching
- STP, EtherChannel
- Layer 2 & Layer 3 Troubleshooting, IP Addressing & Subnetting
- Interface & Port Monitoring
- Network Topology Monitoring

Network Security:

- ACL, VPN, NAT,
- Port Security, Firewall Configuration, OPNsense Firewall,
- Secure Network Access, SNMP Monitoring

Monitoring & Troubleshooting Tools:

NMIS, Loki, Wireshark, PuTTY, NetBox, GTKTerm, Ping, Traceroute, Syslog Monitoring

Operating Systems: Ubuntu Linux, Windows

Routing Protocols:

- OSPF, BGP, Static Routing
- STP/ RSTP
- VLAN Trunking, DNS, DHCP

Automation & Scripting:

- Python, Netmiko, Paramiko, Pandas,
- CSV Log Automation, Network Automation Scripts

Network Devices:

TP-Link, D-Link, Brocade, Quantum, Juniper Switches

CERTIFICATES

CCNA

Besant Technologies

Cisco Packet Tracer & Networking Basics :

Cisco Networking Academy

PROFESSIONAL PROJECTS

Enterprise Network Monitoring & Dashboard Automation:

- Designed centralized NMIS monitoring dashboards for enterprise network visibility, uptime tracking, and device health monitoring.
- Automated switch data collection, interface monitoring, and log retrieval using Python, Netmiko, and Paramiko.
- Implemented centralized logging and real-time alert visualization using Loki for faster fault detection and troubleshooting.
- Generated automated network performance reports for bandwidth utilization, interface behavior, and device activity analysis.
- Improved operational monitoring efficiency by reducing manual troubleshooting and repetitive monitoring tasks.

Switch Connectivity & Infrastructure Visibility:

- Analyzed enterprise switch connectivity to identify unreachable devices and communication failures across network infrastructure.
- Collected LLDP neighbor information, MAC address tables, interface details, and switch inventory data for infrastructure visibility.
- Evaluated endpoint communication, port utilization, and interface performance across multiple switches and network segments.
- Performed packet analysis and SNMP-based troubleshooting to diagnose connectivity interruptions and interface issues. Generated detailed network connectivity reports to support troubleshooting and operational analysis
